

DriverCheck | Vehicle Monitoring & Training

Available as part of our comprehensive fleet safety toolkit

DriverCheck helps identify unsafe behavior with your drivers before a collision occurs. DriverCheck is a leader in fleet and driver safety programs. This service is there for you 24/7, with a proprietary Vehicle Monitoring service designed to save lives, money and jobs through observation, counseling and training.

The program is simple. DriverCheck receives an observation call from someone providing an observation about your driver. An observation report is created and sent to your company via email. Along with the observation report you are provided tips for subject specific counseling, as well as access to online training resources to educate your driver.

DriverCheck is proven to reduce collisions by at least 10%

Alaska National customers have achieved up to a 34% reduction in collisions. Motor vehicle accidents are one of the leading causes of occupational death, and injuries related to these accidents are more costly than other work-related injuries.

Online Training

Use the online risk management program to gain post incident access to:

- Targeted online driver training programs with lessons and exams to help drivers demonstrate their knowledge
- Training modules on various topics including distracted driving, tailgating, right of way, and changing lanes
- The Drivercheck Learning Management System which allows you to assign training, send modules, track driver progress, and monitor results

DriverCheck is provided at no additional cost to all Alaska National auto and workers' compensation policyholders.
